These materials retain their magnetism even after the removal of the applied magnetic field. Hence these materials are used for making permanent magnets.

[Magnetic Properties - NPTEL](#)

High-energy hard magnetic materials like Nd₂Fe₁₄B, SmCo₅ exhibit BH_{max} 80 kJ/m³. Hard magnets are used in all permanent magnets in applications such as power drills, motors, speakers. Soft magnets like Fe, Fe-Si are useful when rapid magnetization and demagnetization is required as in transformer cores. Impurity and other defects should be low for this purpose as they may hinder the domain
