Meningiomas, Multiple Sclerosis, Forensic Problems In Neurosurgery

This 25th annual meeting will deal with two examples of diseases that present common problems to the neurologist and to the neurosurgeon, namely meningiomas and multiple sclerosis. In view of their long histories often going back over many years, both of these lesions lead to diagnostic errors and inadequate treatment. And yet it should be possible to recognize meningiomas at an early date and

Tentorial meningiomas: surgical experience with 61 cases ...

In meningiomas with both supra- and subtentorial growth,

a supratentorial bone flap was combined with a suboccipital craniectomy using a retromastoid incision. The mortality rate was 9.8%. Of the remaining 42 patients, who were followed for at least 5 years, long-term results were good in 26 cases (61.9%), fair in 11 (26.2%), and poor in five (11.9%). Postoperative complications arose in 34% of the patients, but cleared in 27%.
