Metal vapour synthesis of phospho-organometallic  
compounds via reaction of cobalt atoms with the phospho-  
alkyne t-BuC≡P. The past decade has seen the rapid  
development of a rich new area of organometallic  
chemistry in which phosphorus atoms replace CH  
fragments in the more familiar unsaturated organic ligands.  
There is now an extensive range of phospho-  
organometallic compounds

Aromatic derivatives, especially compounds with

meta-ortho dimagnesium derivatives can be formed, but in  
preparation of the latter much diphenylene may be  
produced. 179,213
