Although FLO)I proceeded at once to the real variable, historically he is the founder of the modern theory of the application of the complex variable to plane elastic problems. The method was developed independently by A. C. STEVENS in a paper received by the Royal Society in 1940 but which was not published, for security reasons, until 1945.

Current control plane, with multi-domain, multi-vendor is already a very complex scenario. Control plane becomes much more complex if we consider mixed-grid scenario where Fixed-grid and Flex-grid optical network co-exists.
