Tectonic Inheritance In Continental Rifts and Passive  
...

Continental rifts are not random and generally tend to follow the mobile belts. A well accepted classification of factors that give inheritance is: (i) discrete, and (ii) pervasive.

Tectonic Inheritance in Continental Rifts and Passive Margins

Inheritance greatly influences the architecture of rifted passive margins including the attitude of faults and geometry of horsts, (half-) grabens, transfer zones etc. Inheritance is also a determining factor in the width of rifts and rift shoulder topography.

### Abstract: TECTONIC INHERITANCE DURING EXTENSION IN RIFTS ...

Inheritance results from stress concentration and shear localisation manifested at all scales in the continental lithosphere. Lithosphere-scale controls include crustal thickness, thermal age and plate tectonic boundary conditions.

### Wilson cycle passive margins: Control of orogenic ...

Passive margins accommodate the transitional thinning of the continental crust towards the oceanic sea floor (Fig. 1) and are often discriminated in terms of the volume of igneous rocks emplaced during thinning of the continental crust.

Read "Tectonic Inheritance in Continental Rifts and Passive Margins" by Achyuta Ayan Misra with Rakuten Kobo. This work reviews the mechanism of rifting with a focus on pre-existing tectonic weaknesses in pre-rift and/or basement

### Active and Passive Continental Margins [Part 1]

Passive margins are often located in the interior of lithospheric plates, away from the plate boundaries, and lack major tectonic activity. They often face mid-ocean ridges. The East Coast of the
