The Pharmacology of the urinary tract has proved to be a difficult area of study. Slowly but progressively it has become evident that this is an area of great potential for urologists. Our patients have a range of problems where non-surgical management would be ideal but finding the right drug for the right condition has remained an elusive task. Many of the earlier trials showed an impressive

[Pharmacology of the urinary tract - ScienceDirect](#)

Importance of pharmacology in the urinary tract The urinary tract is a transport and storage system for urine, and is lined by muscle (largely smooth muscle) to facilitate these processes. Muscle activity, mainly under the control of the autonomic nervous system, facilitates the storage and expulsion of urine from the bladder, although there is also spontaneous activity, for example in the ureter.
